

Analysis plots for the run 2145: Hit threshold is  $4.0\ \sigma$  and minimum number of hits in the cluster is 1

June 24, 2024

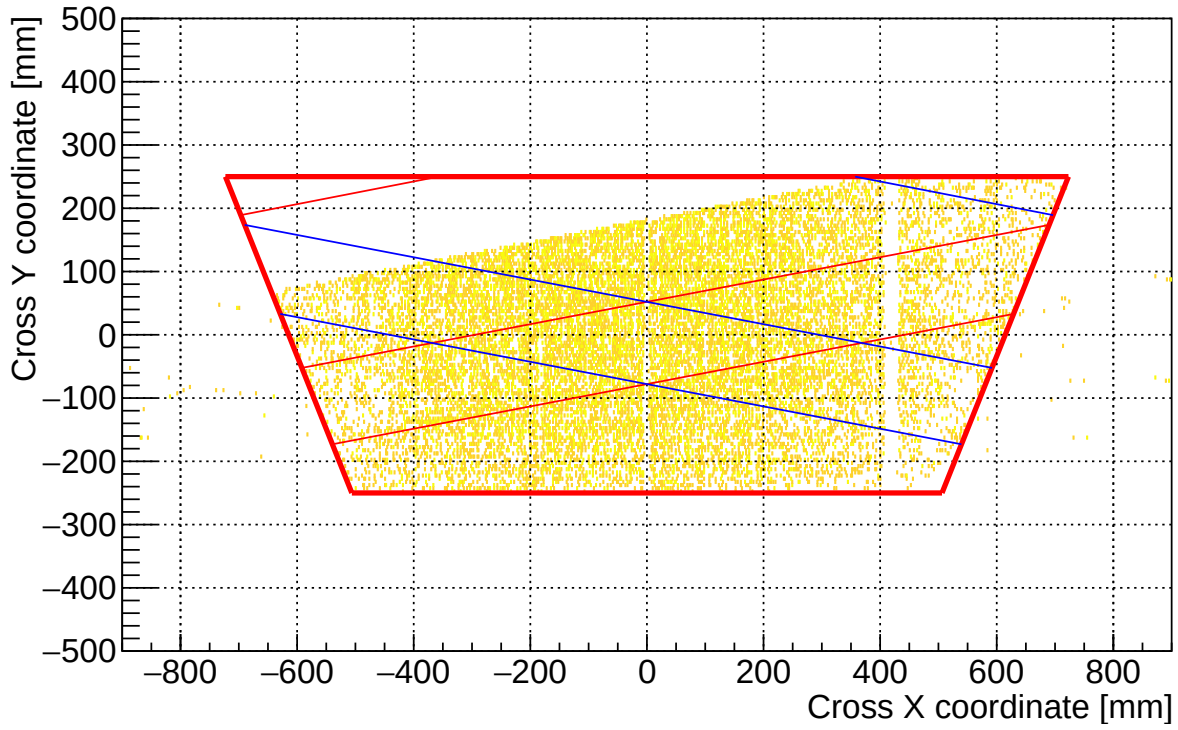

Figure 1: Cross  $Y$  vs  $X$  distribution. Events are not weighted.

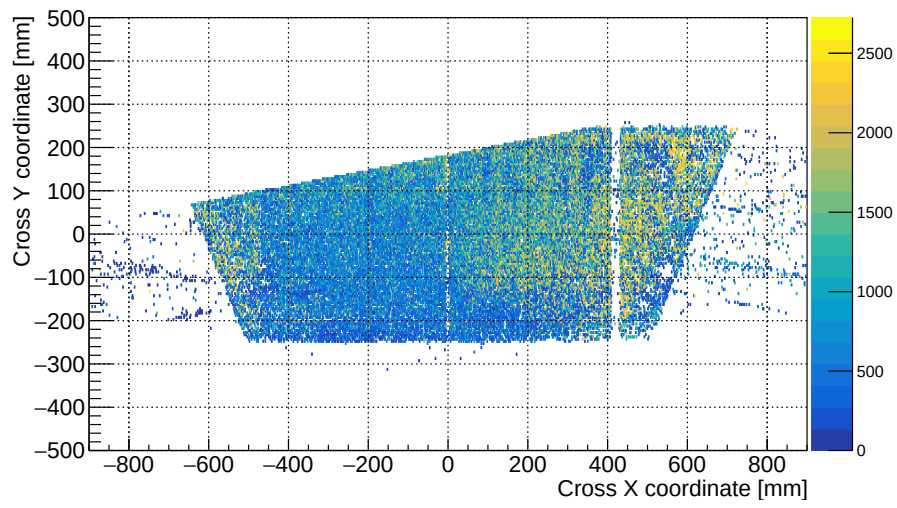

Figure 2: Cross  $Y$  vs  $X$  distribution. Events are weighted by  $ADC = ADC\_U + ADC\_V$ .

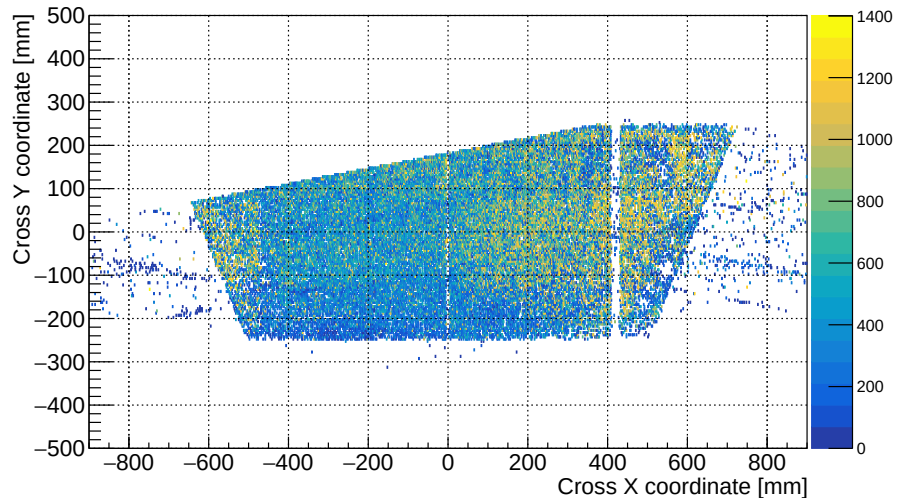

Figure 3: Cross  $Y$  vs  $X$  distribution. Events are weighted by  $ADC\_U$ .

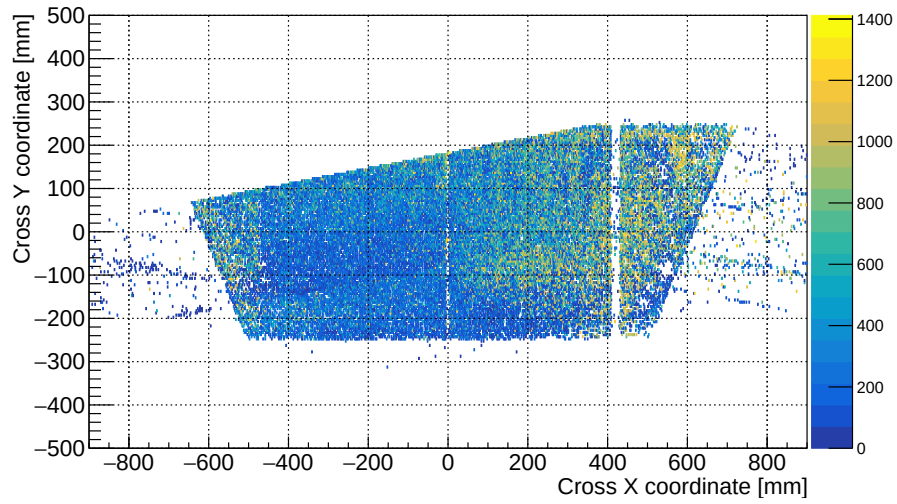

Figure 4: Cross  $Y$  vs  $X$  distribution. Events are weighted by  $ADC\_V$ .

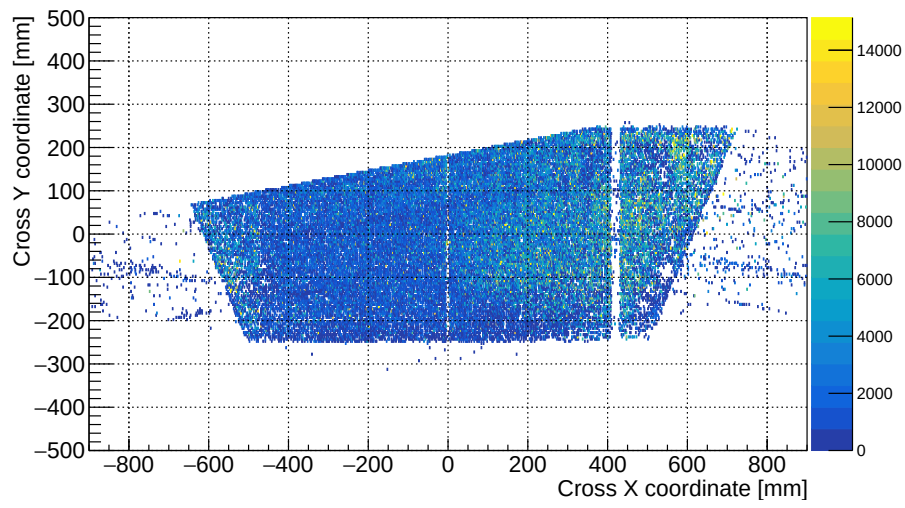

Figure 5: Cross  $Y$  vs  $X$  distribution. Events are weighted by Energy =  $E_U + E_V$ .

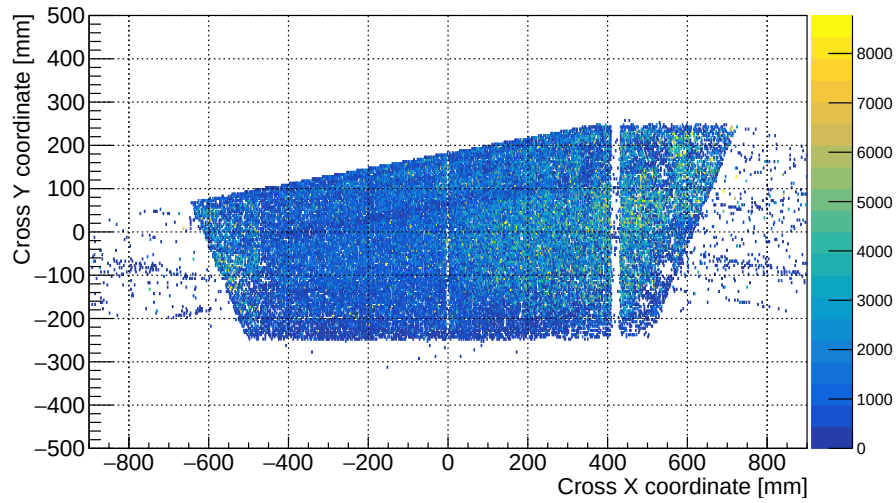

Figure 6: Cross  $Y$  vs  $X$  distribution. Events are weighted by  $E_U$ .

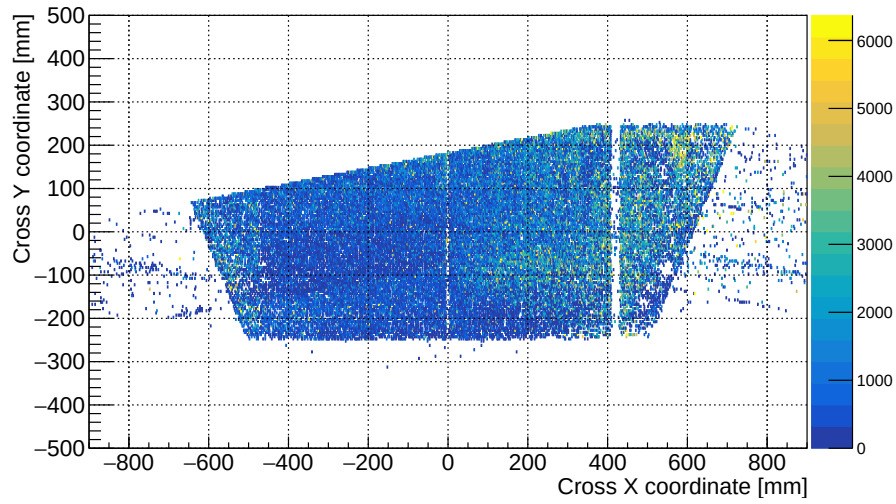

Figure 7: Cross  $Y$  vs  $X$  distribution. Events are weighted by  $E_V$ .

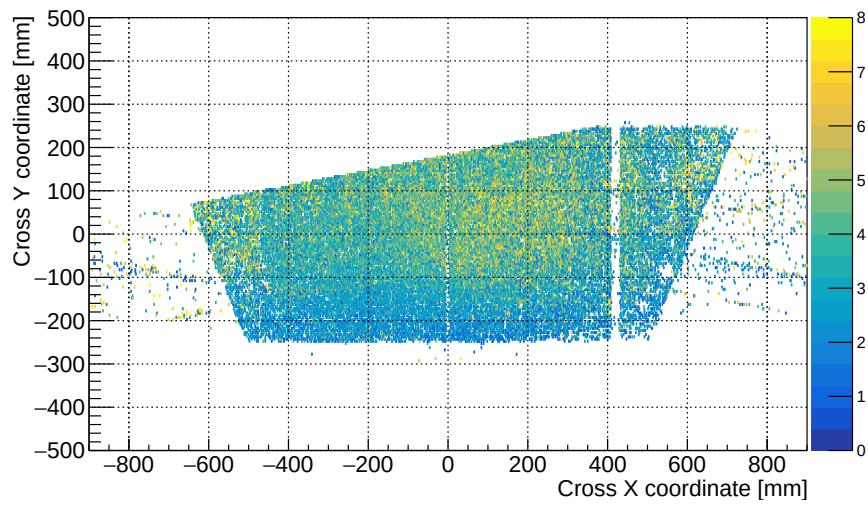

Figure 8: Cross  $Y$  vs  $X$  distribution. Events are weighted by U cluster peak time  $t_U$ .

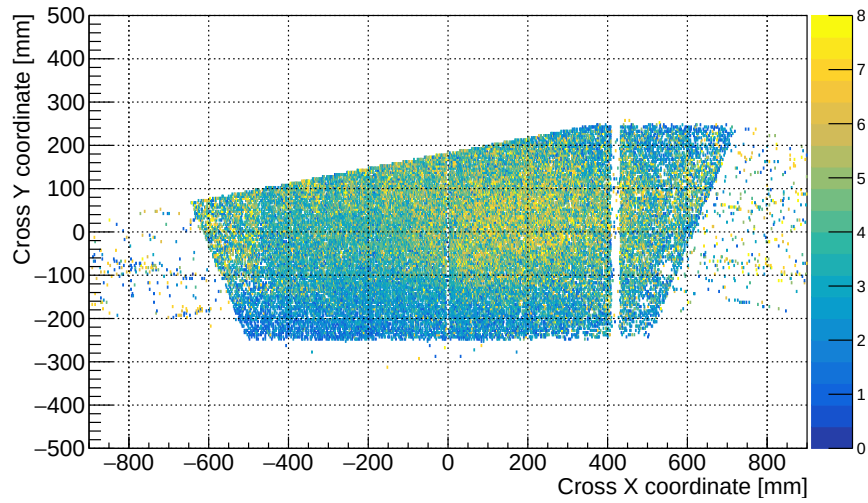

Figure 9: Cross  $Y$  vs  $X$  distribution. Events are weighted by V cluster peak time  $t_V$ .

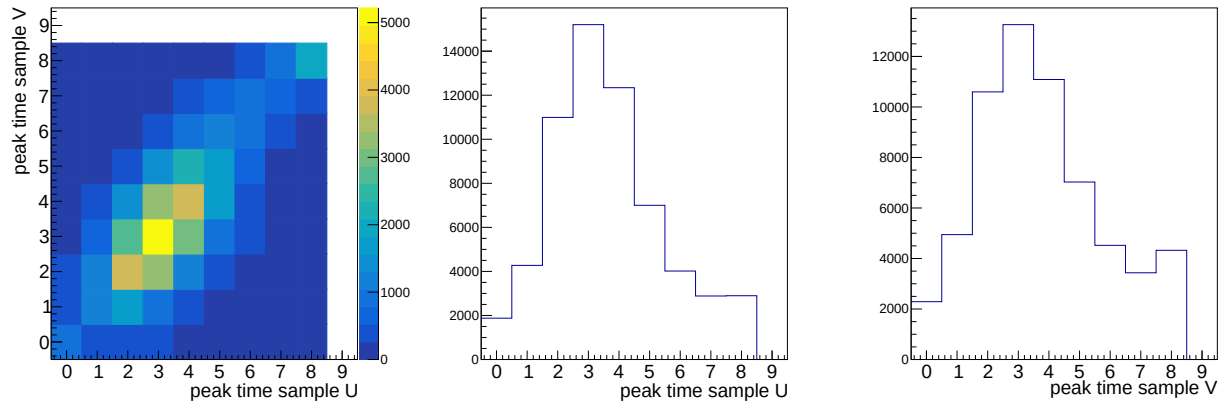

Figure 10: Peak time distributions: Left: "V vs U" cluster peak time, middle: U cluster peak time, and the right is the V cluster peak time.

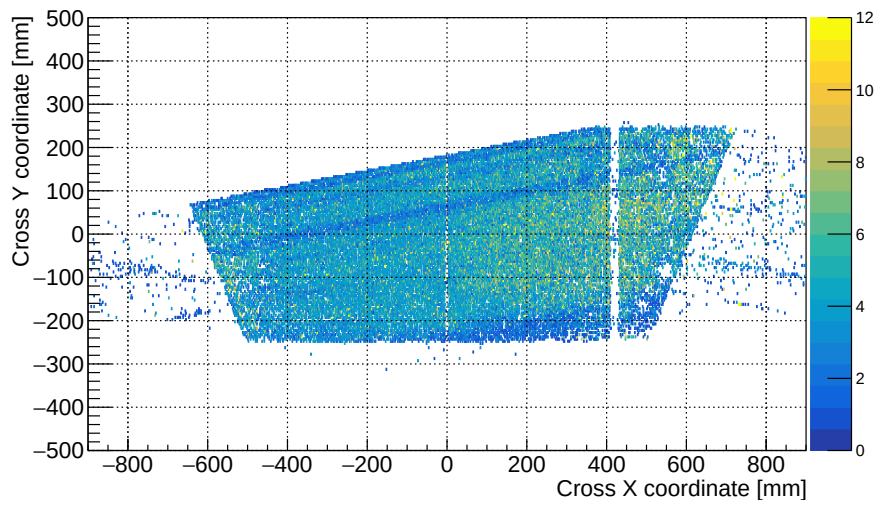

Figure 11: Cross  $Y$  vs  $X$  distribution. Events are weighted by  $U$  cluster size.

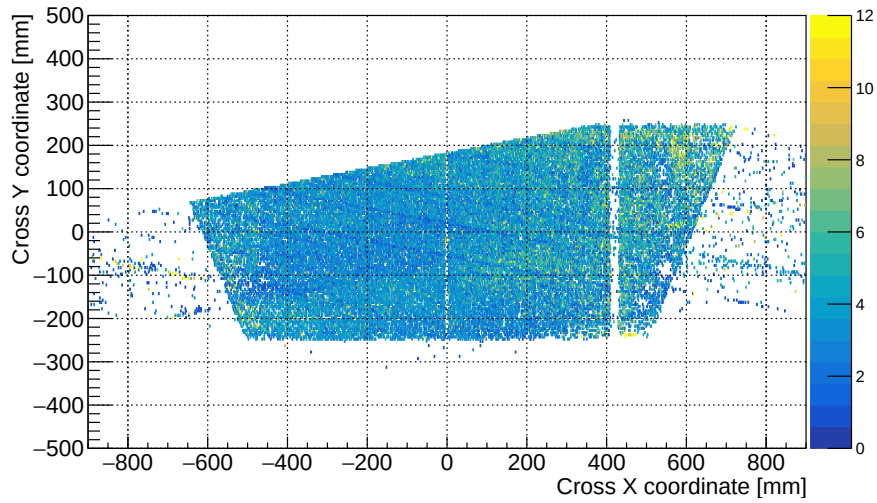

Figure 12: Cross  $Y$  vs  $X$  distribution. Events are weighted by  $V$  cluster size.

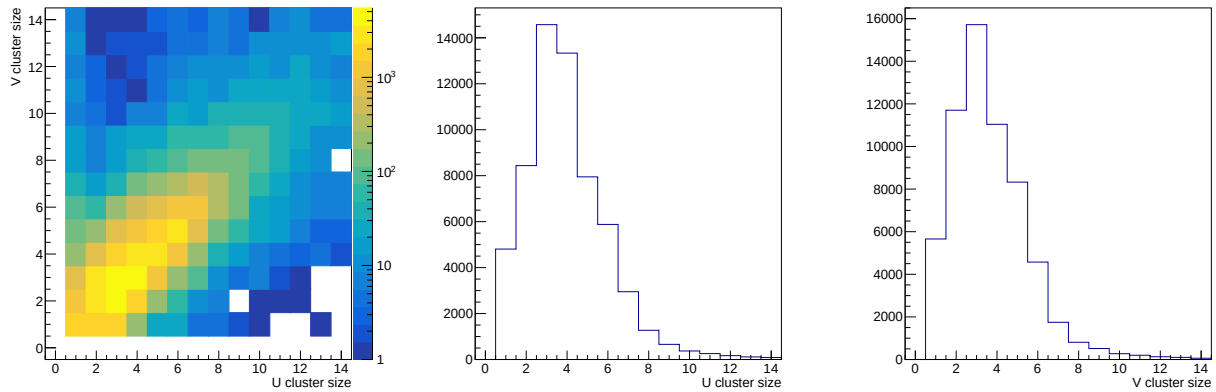

Figure 13: Cluster size distributions: Left: "V vs U" cluster sizes, middle:  $U$  cluster size, and the right is the  $V$  cluster.

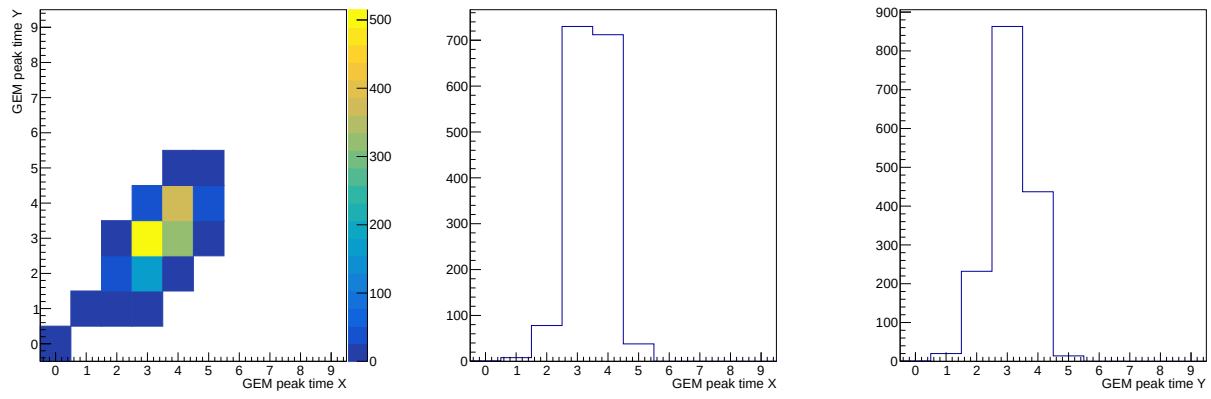

Figure 14: GEM cluster peak time distributions. Left “Y vs X” cluster times, middle GEM X cluster peak time, and the right represents GEM Y cluster peak time distribution.

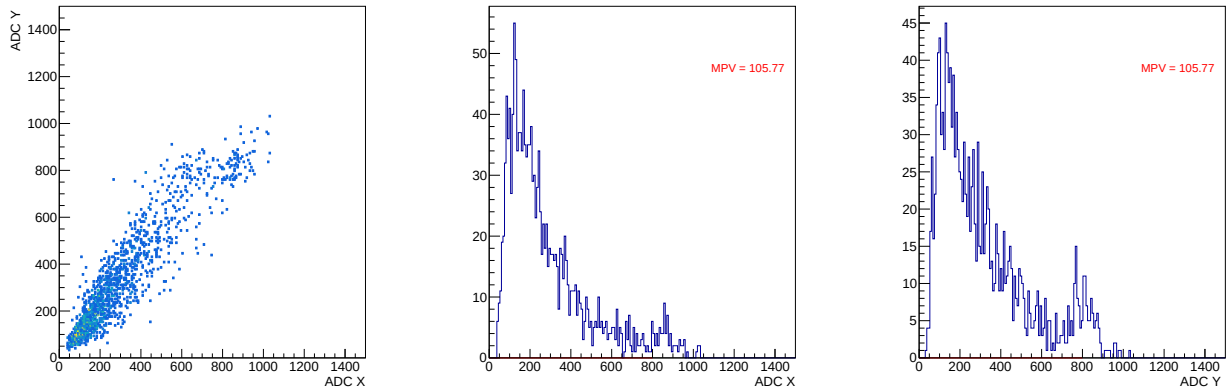

Figure 15: GEM ADC distributions. Left “ADC Y vs ADC X”, middle ADC X distribution and the right represents ADC Y distribution

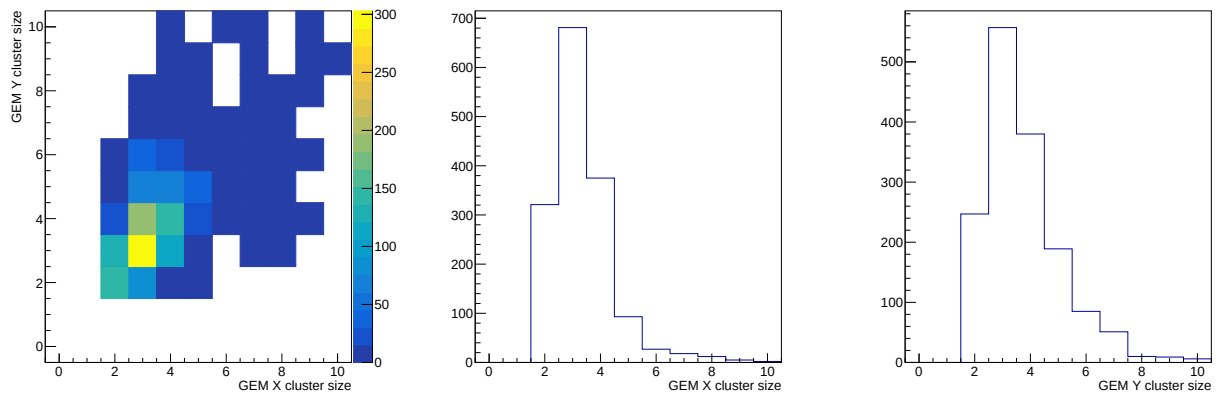

Figure 16: GEM cluster size distributions. Left “Y size vs X size”, middle X size distribution and the right represents Y size distribution
